

Cause and Effect

Every time something happens,
there's a reason it did
Something caused it to happen
or it would never have been

And that thing that happened
is called an effect sometimes
And the thing that caused it
is called the cause,
and you can probably guess why

The cause is why something happened
The effect is what happened
because of the cause
You studied really hard for a lesson
You got an A on the test
and your teacher's applause
The cause was you studied really hard
and the effect was
you passing the test
One thing led to another
and that's cause and effect,
yeah that's the cause and effect

Lulu had plans
for a day by the pool
Her mom said to wear sunscreen
but she said, "nah, it's cool"
When she woke up the next day
all of her skin was red
Being out in the sun was the cause
Sunburn was the effect

The cause is why something happened
The effect is what happened
as a consequence
You left some food out in the kitchen
and when you came back,
there was an army of ants

The cause was the food you left out
and the effect was a room full of pests
One thing led to another
and that's cause and effect,
yeah that's the cause and effect

The cause is why something happened
The effect is what happened
consequently
A meteorite plowed into the planet
and after that
all the dinosaurs were extinct
The cause was a rock hitting the earth
and the effect was
there's no more T-Rex
One thing led to another
and that's cause and effect,
yeah that's the cause and effect
