

Name: _____

Date: _____

Show Me the Evidence!

Read the passage below. Answer the questions by citing evidence from the text. Highlight or underline the evidence you use in the passage.

Rivers

Rivers are giant streams of water that flow through the land. They start small in the mountains or hills and grow bigger as they travel downhill. Rivers are home to many different animals like fish, frogs, and turtles. They provide water for plants and animals to drink and help farmers grow crops. Sometimes rivers can be rough and fast, and other times they're calm and slow. People use rivers for transportation by boats or rafts. Along the banks of rivers, you can find trees and bushes that provide homes for birds and other creatures. It's important to keep rivers clean because they give us so much and support life for many living things. Rivers are an essential part of our planet's ecosystem!

What can be found along riverbanks?

What kinds of animals live in rivers?
